Business overview and background

- / Founded in 2017, the Company is an **engineering expert company** specializing in the **design** and **integration** of hybrid hydrogen systems for stationary, mobile, and critical applications.
- / Based on a **proprietary technology** combining fuel cells, batteries and advanced control software, the Company provides a **low-carbon alternative** to conventional generators.
- / The Company relies on a longstanding partnership with the **CNRS** and has a base of more than **140 clients** across **18 countries**.
- / After several years devoted to the technological development and the industrialization of its products, the shareholders have initiated a process to identify an **industrial partner** capable of **supporting the commercial and industrial development** of the Company.

2025 revenue breakdown

- Custom engineering
- Generator sets
- Education

Target segments

Construction
Generator sets

Defence
Tactical systems

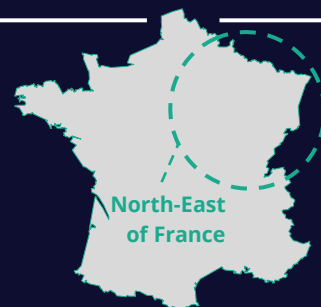

Education
Training equipment

Custom studies
Flexibility and adaptability

Key acquisition considerations

- / Portfolio of **intellectual property** on hybrid hydrogen systems
- / Exposure to markets supported by **sovereignty concerns**
- / **Established commercial traction** in France and internationally
- / Technological expertise built over nearly **ten years of development**
- / Early positioning in **autonomous infrastructure**
- / **Strong references** across the hydrogen training ecosystem

RYDGE Conseil – Contacts

- / RYDGE Conseil was appointed to search for **buyers for majority share or total shares**. A full information package is available on request; our contact details are as follows:

Floraine BARITEL
